**London SE1 9BG (GB)**

Remarks:

This application was filed on 26-06-2018 as a  
divisional application to the application mentioned  
under INID code 62.

(54) **PREVENTING SELF-INDUCED INTERFERENCE IN DUAL-RADIO DEVICE**

(57) In a wireless device that includes two different radio transceivers that communicate in two different wireless networks, wireless transmissions from one radio in the first network may be timed so that they do not coincide with wireless receptions by the other radio in the second network. A non-wireless interface between the two radios may be used to convey information about the scheduled reception times so that the transmissions will not be scheduled during those reception times. This may be particularly useful when the receiving radio is operating in a centralized and highly scheduled network, while the transmitting radio is operating in a more decentralized network.
