Remarks:

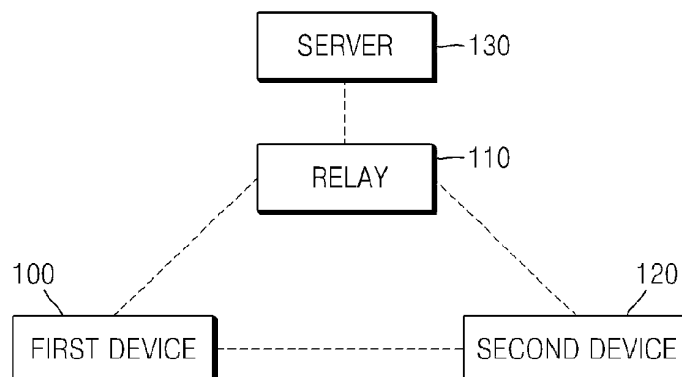

This application was filed on 22-06-2018 as a divisional application to the application mentioned under INID code 62.

(54) **CONNECTING TWO DEVICES AND EXECUTING AN APPLICATION**

(57) A method for executing an application based on a connection between devices by automatically connecting devices, and a device, are disclosed. The method includes: detecting, by a device, an occurrence of a first communication between the device and at least another device; transmitting connection information which relates to a second communication to be performed by the device and application information which relates to the device to the at least other device via the first communication;

receiving information which relates to the second communication from the at least other device; establishing, based on the received information, the second communication between the device and the at least other device; receiving a control signal which is based on an application which is executed by the at least other device via the second communication; and operating the device based on the received control signal.

FIG. 1
