Patentanwälte, Rechtsanwälte
Prinzregentenplatz 7
81675 München (DE)

Remarks:

This application was filed on 05-07-2018 as a
divisional application to the application mentioned
under INID code 62.

(54) **ADMISSION CONTROL AND LOAD BALANCING**

(57) Certain aspects of the present disclosure relate to methods and apparatus for wireless communication, and more particularly, to methods and apparatus to enable a node to be aware of active services and context for a mobile device in order to determine the load balancing and admission control for the services. For example, in certain aspects, a mobile device for managing at least one data flow between a core network and the mo-

bile device may determine whether at least one of the data flow or a service related to the data flow should be reported and send a report to a first node based on the determination. The report may identify at least one of the data flow or service and indicates a packet data network (PDN) connection or bearer associated with the service or data flow.
