(57) **ABSTRACT**

A method is provided for performing network selection and
traffic routing. A user equipment (UE) receives an Access
Network Discovery and Selection Function (ANDSF) rule
including an Inter-System Routing Policy (ISRP) rule or an
Inter-Access Point Name (Inter-APN) Routing Policy
(IARP) rule. The UE receives, from a base station, radio
access network (RAN) assistance information. The RAN
assistance information received from the base station is used
to evaluate the ISRP rule or the IARP rule of the ANDSF
rule. The UE evaluates whether the ISRP rule or the IARP
rule of the ANDSF rule is valid or not by using the RAN
assistance information. The UE selects one of the RAN
assistance information and the ANDSF rule including the
ISRP rule or the IARP rule.
